## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,116,445 to Ikemori et al.

Ikemori shows a closure for a container as seen in Fig. 1, having a main body portion 8 with integrally formed sealing means 8 closing the opening of a container 1, a plunger 9 mounted for movement within the main body and having a pouring opening 10a and a passage defined by the circumferential wall 12, the plunger is movable between a first sealed position, see Fig. 9 to a second open position, see Fig. 10.

In reference to claims 3, 4, 5 and 8:

The plunger has a force concentration member 12b designed to break the seal means at a pre-weakened area by pressing down on the relative flat portion of the plunger, see column 4, lines 59-64.

In reference to claims 10, 11 and 15:

The closure is integrally molded from plastic, see column 1, line 10, and Fig. 13.

In reference to claims 12, 13 and 14:

The closure of Ikemori has a resalable protective mean 11 hinged on the closure by hinge 11b.

Art Unit: 3754

3. Claims 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,195,731 to Cavazza.

Cavazza disclosed a device that performs the method steps of:

- (a) Removing the protective structure 15 that prevents depression of the plunger 8.
- (b) Depressing the plunger member to break the seal 3, and
- (c) Dispensing the content of the container 5.

As claimed in the method claims.

#### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Morini shows a package for keeping products. Adams shows a closure having rotatable spout and axially movable stem. Malpas shows a dispensing tap.
